### DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claim 34 is rejected under 35 U.S.C. 102(a) as being anticipated by Heidner et al. in U.S. Patent Application Publication No. 2003/0149465. Heidner et al. discloses as described in paragraph 39 using melting and flowing of an outer member to bond with a core wire.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 1793

5. Claims 1-3, 5-8, 10-12, 14-19, 21-23, 25-31 and 33-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Safarevich in U.S. Patent No. 6,061,595 in view of Japan Patent No. 59-92,188. Safarevich discloses a method of making a medical device by laser welding an elongated shaft (element 48) to a helical coil (element 36) and then cooling but Safarevich uses a laser beam to create fusion bonds by melting both workpieces. Japan Patent No. 59-92,188 teaches only melting the workpiece with the lower melting point temperature and flowing the molten material to create a mechanical bond between the workpieces. It would have been obvious to adapt Safarevich in view of Japan Patent No. 59-92,188 to provide this to create mechanical bond without having to expend the necessary energy to melt the workpiece (connector 52) with the higher melting point or larger metal mass, thereby making the bonding process more energy efficient.

6. Applicant's arguments with respect to claims of record have been considered but are moot in view of the new ground(s) of rejection.
